#### LOWER RIO GRANDE PUBLIC WATER WORKS AUTHORITY

#### **MINUTES - SPECIAL BOARD OF DIRECTORS MEETING**

9:30 a.m. Monday, October 31, 2011 at the Vado Office, 325 Holguin Road NOTE: Minutes are a DRAFT until approved and signed by the Board of Directors

- I. Sign in, establish quorum, call meeting to order: Sign-in sheet, Agenda and Selection Committee Tally Report are attached. President Roberto Nieto called the meeting to order at 9:33 a.m. Directors present were Mr. Nieto, Vice-president John Holguin and Secretary Santos Ruiz. Director Blanca Martinez had called to say she was running late and arrived after item II. Staff members present were General Manager Martin Lopez and Projects Manager Karen Nichols.
- **II. Approval of agenda:** Mr. Holguin made a motion to approve the agenda, Mr. Ruiz seconded, and it carried unanimously.
- III. RFP 2012-1 Selection Committee Recommendations & Engineering Firm Interviews: Handouts from the Interviewees are attached.

9:30 a.m. - Molzen Corbin: Jerry Paz and Clayton Teneyck were interviewed. {32:14}

**10:00 a.m. – Bohannan Huston:** Rob Richardson, Matt Thompson and Robert Fundie were interviewed. {1:05:07}

**10:30 a.m. – Parkhill, Smith & Cooper:** Brian Stephens, Keith Rutherford, Gilbert Andujo and Matt Dyer were interviewed. {1:39:13}

The audio recording was paused at 11:13 a.m. and resumed at 11:25 for a bio-break.

- IV. Selection of an engineering firm for the Surface Water Treatment Plant Project: Ms. Martinez made a motion to select Bohannan Huston, Inc., Mr. Ruiz seconded, and there was some discussion. Consensus from the discussion was that all three firms made a very positive impression, and BHI in their partnership with CDM expressed the most thorough grasp of the project requirements. The motion carried on a vote of 4-0.
- **V. Adjourn**: Mr. Holguin made a motion to adjourn, Mr. Ruiz seconded, and it carried unanimously. Mr. Nieto declared the meeting adjourned at 11:30 a.m.

Date Minutes Approved:	
Directors Present:	
Chairman Roberto M. Nieto	Director Blanca Martinez
Vice- Chairman John Holguin	
Secretary Santos Ruiz	
ABSENT	
Director Rosaura Pargas

#### LOWER RIO GRANDE PUBLIC WATER WORKS AUTHORITY

#### SPECIAL MEETING NOTICE & AGENDA - SPECIAL BOARD OF DIRECTORS MEETING

9:30 a.m. Monday, October 31, 2011 at the Vado Office, 325 Holguin Road

Agendas are final 24 hours prior to the meeting and may be obtained at any LRGPWWA Office - call 575-233-3947 for information

- I. Sign in, establish quorum, call meeting to order
- II. Approval of agenda
- III. RFP 2012-1 Selection Committee Recommendations & Engineering Firm Interviews

9:30 - Molzen Corbin

10:00 - Bohannan Huston

10:30 - Parkhill, Smith & Cooper

- IV. Selection of an engineering firm for the Surface Water Treatment Plant Project
- V. Adjourn

If you are an individual with a disability who is in need of a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aide or service to attend or participate in the hearing or meeting, please contact the LRG PWWA office at 575-233-3947, 325 Holguin Rd, Vado NM 88072 at least one week prior to the meeting or as soon as possible. Public documents, including the agenda and minutes, can be provided in various accessible formats. Please contact the LRGPWWA office if a summary or other type of accessible format is needed.

Si es un individuo con una incapacidad esta en necesidad de un lector, amplificador, lenguaje por senas, o cualquier otra forma de asistencia o servicio para atender o participar en las juntas, por favor llame ha la oficina LRG PWWA office at 575-233-3947, 325 Holguin Rd, Vado NM 88072 una semana antes de la junta o en cuanto posible. Documentos públicos, incluyendo la agenda y minutos, están disponibles en varios formatos. Por favor opóngase en contacto con la oficina LRGPWWA si un resumen o otro tipo de forma accesible es necesario.

#### NOTICE OF POTENTIAL QUORUM

A quorum of the Board of Directors of the Lower Rio Grande Public Water Works Authority may be present at the New Mexico Infrastructure Finance Conference in Albuquerque during October 25-27, 2011. No board meetings will be convened, no board business will be discussed, and no board action will be taken during this conference.

# **LOWER RIO GRANDE PWWA**

SURFACE WATER TREATMENT FACILITY INTERVIEW

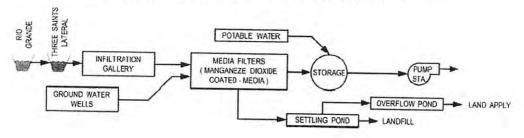

MOLZENCORBIN

ENGINEERS | ARCHITECTS | PLANNERS

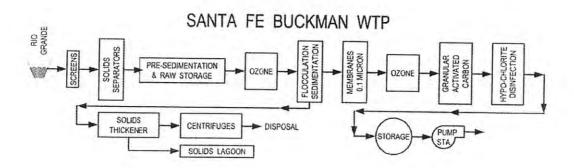

## **Current PER Deficiencies**

- Missing Operational Methodology (Run time, EBID service, Seasonal...). Need baseline histogram to document process.
- No Disinfection Included.
- High organic carbon was shown in water analysis. This requires advanced oxidation to control disinfection byproducts.
- Infiltration gallery is inadequate to remove fine sediment. Need sedimentation and flocculation/clarification prior to media filters to prevent clogging.
- Missing Integration with Existing Infrastructure.
- Need Computations for Blending, Filtration, and Process.
- The one alternate considered was ruled out based on complexity and not treatment effectiveness

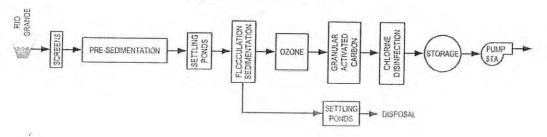

#### PROCESS SCHEMATIC - LRGPWWA PER

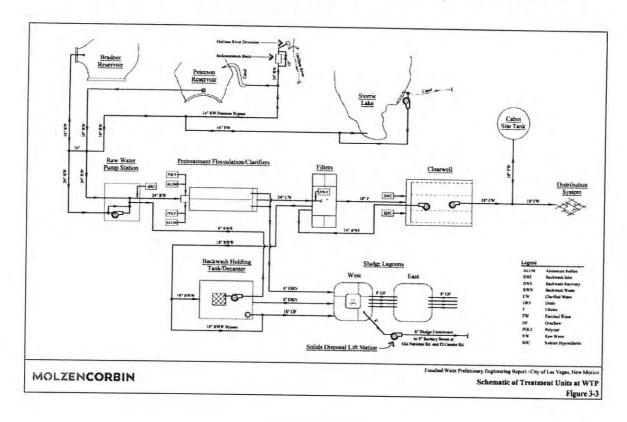

# **Need Alternative Comparison**

#### ALBUQUERQUE WTP

# **Need Alternative Comparison**

# **Useful Information in PER**

- Data and Test Reports
- Demographics and Population Projections
- Environmental Document, as long as footprint remains the same
- All of the data regarding the existing systems and system assets
- The site selection is useable, the parcel size may need to be re-examined

### Where LRGPWWA Goes from Here

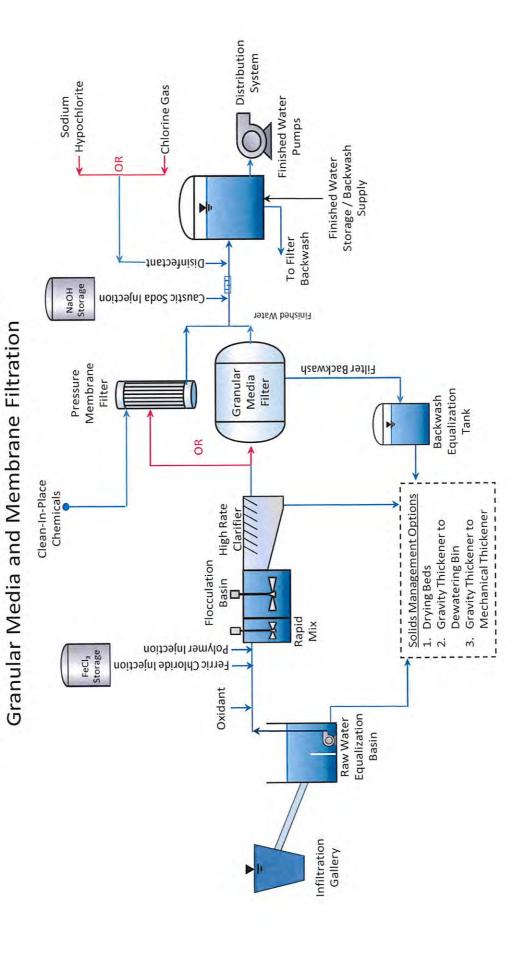

- Negotiate with LRGPWWA and NMED Scope Changes
- Review New Alternates
- PER Amendment
- Supplemental Report
- Amended EID
- 4 to 6 months

# Why Molzen Corbin

- Extensive Experience in all phases of water treatment
- Specific knowledge of surface water treatment techniques
- New Mexico Based
- Working knowledge of NMED requirements
- Proven Track Record of projects that work!

# LRGPWWA Surface Water Treatment Rules

- Surface Water Treatment Rule (SWTR) and Long Term 1 Enhanced Surface Water Treatment Rule (LT1ESWTR) apply.
- SWTR and LT1ESWTR applies to all public water systems using surface water or groundwater under the influence of surface water
- Purpose is to control microbial contaminants particularly viruses, cryptosporidium, and Giardia
- Filtration and disinfection achieving 99.9 percent removal and/or inactivation of Giardia and 99.99 percent removal and/or inactivation of viruses, and 99.9 percent removal/inactivation of Cryptosporidium
- Achieve a turbidity performance standard of less than or equal to 0.3 NTU.
- Zero total coliforms
- Cryptosporidium must be removed in filtration
- To meet the Disinfection By-Products (DBPs) Rule, it will be essential to remove Total Organic Carbon (TOC) so that DBPs are not formed in the system
- SWTR specifies monitoring and reporting requirements for turbidity, and disinfection
- A level 4 operator will most likely be required to operate the plant.

# RINCON VALLEY SURFACE WATER TREATMENT PLANT DESIGN STUDY

**MARCH 2005** 

Prepared For:
Village of Hatch
Lower Rio Grande Water Users Association

Prepared By:

Bohannan A Huston &

425 S. Telshor Blvd. Ste. C-103 Las Cruces, NM 88011 AEGEAN CONSULTING, LLC

5925 San Augustin Dr Las Cruces, NM 88012

#### 10 Preliminary Opinions of Cost

#### 10.1 Cost Estimating Methodology

The costs presented in this report are based on the Year 2004 prices. The methodology used in the capital cost estimates presented in this study is summarized below:

- The equipment costs were based on quotes obtained from the equipment manufacturers. The prices supplied by the manufacturers were increased by 30 percent in order to accommodate contractor mark-up and installation costs. Actual contractor mark-up and installation costs will vary based on the type and complexity of the equipment installed, but the average value should not exceed 30 percent.
- The structural costs were based on the estimated amount of concrete and excavation / backfill / compaction required for each unit. A unit concrete cost of \$500 per cubic yard and a unit excavation / backfill / compacttion cost of \$15 per cubic yard were used. Costs associated with metal fabrications (gratings, handrails etc) for each unit and buildings were also added to the structural costs on a lump sum basis for each structure.
- The excavation costs for the presedimentation basins were estimated using \$4 per cubic yard.
- Building costs were estimated at \$100 per square foot, not including the equipment.
- The estimated cost numbers were rounded up to the nearest \$1000 for every unit.

The methodology used in estimating the yearly operating and maintenance costs (O&M) is summarized below:

- Personnel labor costs include salaries, overhead, and benefits for the plant operators.
- Power costs were based on the total power consumption (kwh per day) obtained from the equipment manufacturers. The cost of electricity was assumed at \$0.10 per kWh.
- Equipment replacement costs include expenses for the replacement of old pumps, valves, aeration
  equipment, and other mechanical equipment within the 20-year life of the facility. It was assumed that the
  equipment be replaced will be purchased directly from the suppliers and installation is performed by the
  operators. Hence, no contractor mark-ups and installation costs were added for equipment replacement.
- Chemical costs were based on approximate chemical usage as obtained from the manufacturers.
- Compliance testing costs include costs associated with testing and sampling of the treated effluent to meet the regulatory requirements.
- Telephone and utility costs include costs associated with telephone, gas, solid waste, etc at the plant site.
- Vehicle fuel and maintenance costs include expenses for the vehicles used around the facility.
- In accordance with the industry standards, a contingency fund is included in order to allow for any other expenses that may be identified during the preliminary and final design of the plant.

#### 10.2 Preliminary Opinion of Construction Costs

#### 10.2.1 Preliminary Opinion of Construction Costs for the Treatment Facility

A preliminary cost estimate for the proposed membrane treatment facility is presented in Table 22. The total construction cost for the 1.5 MGD membrane treatment facility is estimated as \$6,676,000 not including the

<sup>\*</sup> All costs are presented as lump sum.

<sup>\*\*</sup> Includes filtrate and backwash pumps, valves, air supply system, blowers, maintenance wash system, CIP system, controls, SCADA, freight, installation, and start-up services.

<sup>\*\*\*</sup> Costs for connection to distribution system are included in Table 23.

engineering costs and NM Gross Receipts Tax. The total of all the phases is estimated around \$8,562,000. The costs associated with the first phase are higher than the other phases since many units including the controllers, coagulant systems, and carbon system, must be installed during the first phase.

#### 10.2.2 Preliminary Opinion of Construction Costs for the Distribution System Connections

The preliminary construction cost estimates for the distribution system connections is shown in Table 23. The high pressure pump station will be located at the WTP site next to the storage reservoirs (see Table 22 for costs). Pumping of water to Salem/Garfield from Hatch, and pumping of water to Spaceport from Rincon are not included in this cost estimate.

Table 23. Preliminary Construction Cost Estimate for the Distribution System Connections

Description	Unit	Quantity	T	otal Cost
11.70	LF	2,000	\$	40,000
10" DI	LF	14,000	\$	350,000
12" DI	LF	30,000	\$	1,050,000

Engineering & Construction Admin New Mexico Gross Receipts Tax	6.4%		\$	130,000
TOTAL OF DISTRIBUTION SYSTEM CONNECTIONS		\$	2,148,000	
AMORTIZED COSTS AT 5% FOR 20 YRS		\$	173,000	

<sup>\*</sup> ROW and easement costs are not included.

Transmission lines to Salem/Garfield from Hatch and to the Spaceport from Rincon are not included.

#### 10.3 Preliminary Opinion of Operating and Maintenance Costs

The estimated operating and maintenance (O&M) requirements for the Rincon Valley WTP include the following:

- Power consumption for the membranes, blowers, pumps, and other mechanical equipment
- Periodic disposal of screening materials and solids accumulated in the presedimentation / storage basins
- Equipment replacement costs including membranes, blowers, pumps, and miscellaneous valves
- Labor

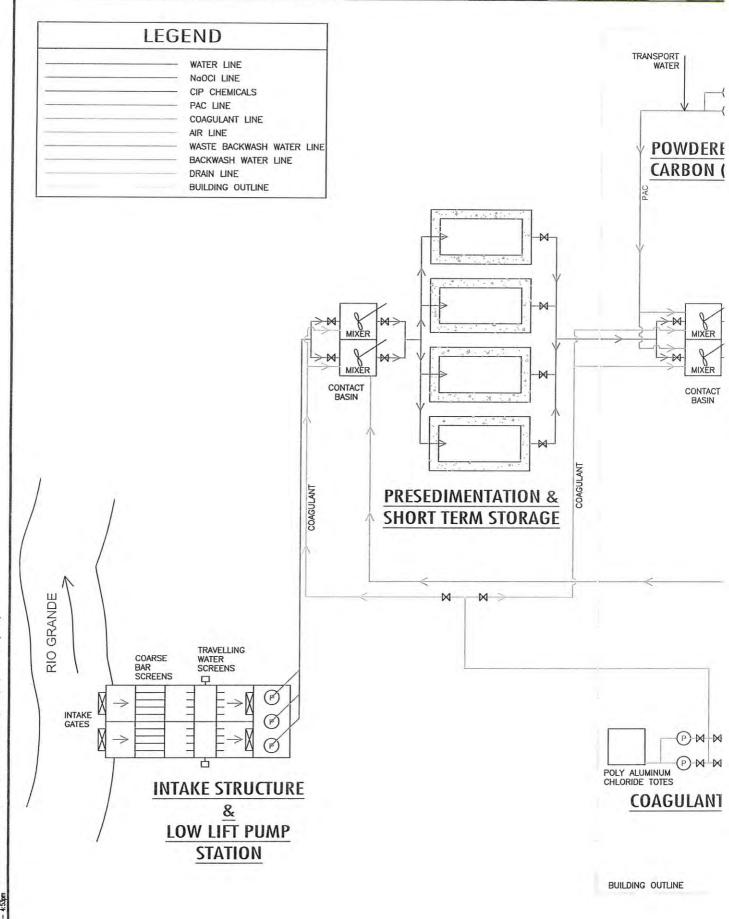

For the first phase of the facility, two part time operators is assumed. For ultimate phase, two full time operators can be employed. In general, a membrane plant does not need full-time (around-the-clock) attention. Two

operators should be able to operate and maintain the plant adequately. The O&M costs estimated for the 1.5 MGD and 4.5 MGD facility are summarized in Table 24. The details of the estimates are provided in Appendix H. The estimates provided in Table 24 include treatment as well as pumping to distribution system costs.

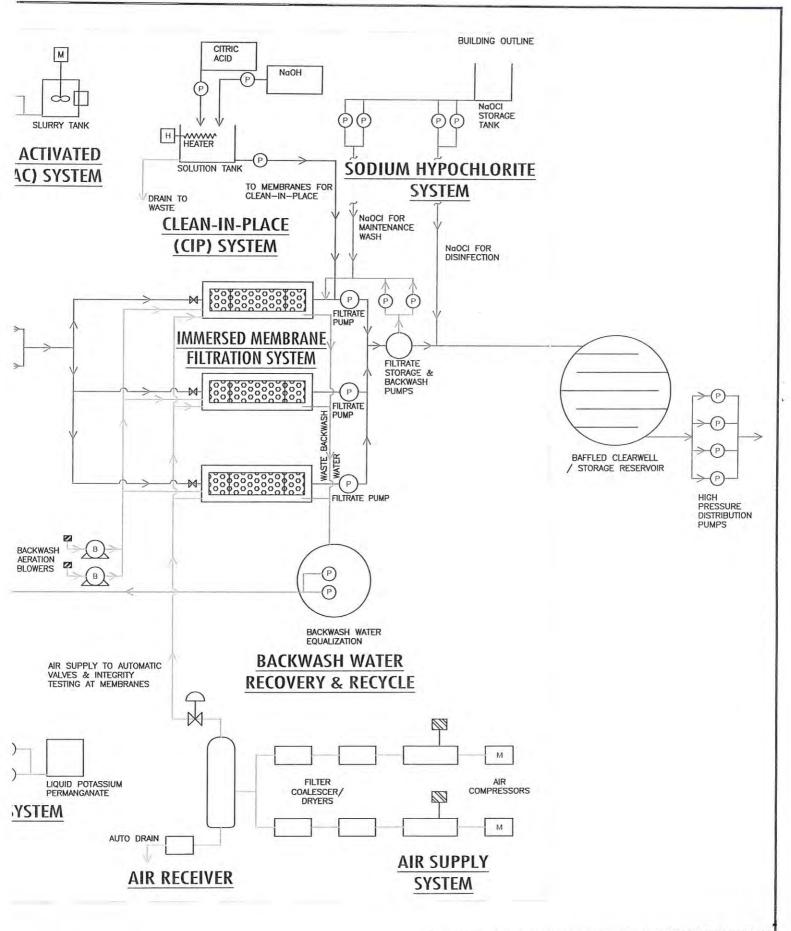

Table 24. Preliminary Operating & Maintenance Cost Estimate for the Facility

Item	Phase 1	Ultimate Phase (4.5 MGD)	
item	(1.5 MGD)		
Labor	\$63,000	\$125,000	
Power	\$201,000	\$307,000	
Equipment replacement	\$49,000	\$69,000	
Chemical consumption	\$48,000	\$143,000	
Residuals disposal	\$30,000	\$90,000	
Compliance testing	\$5,000	\$5,000	
Telephone	\$3,000	\$3,000	
Vehicle fuel and maintenance	\$3,000	\$3,000	
Contingency fund	\$3,000	\$5,000	
TOTAL ANNUAL O&M COSTS	\$405,000	\$750,000	
O&M COST PER 1000 GALLON	\$0.74	\$0.46	

The O&M cost per 1000 gallon of finished water was estimated at \$0.44 in the previous Siting Study, 2000. The costs presented in this study are comparable to the results of the previous studies. It should be noted that, however, due to the limited data available for the total organic carbon, color and odor causing contaminants, iron and manganese as well as seasonal turbidity fluctuations, the actual chemical consumption values may be lower or higher than presented in Table 24.

# SURFACE WATER TREATMENT PLANT

Brian Stephens | Firm Principal
Matt Dyer | Client Manager
Keith Rutherford | Project Manager
Gilbert Andujo | Funding

Professional Services HEP No. 2012-01 October 30th

#### **PSC Recommendations**

Recommend Authority Re-Evaluate size of plant
Current Population of 11,000 - Projected Population in 2050 of over 30,000
Average Usage of 100 gpcd (2007-09 Records)
1.2 MGD needed— Proposed 1.0 MGD plant is undersized for current demands
Recommend 2.0 MGD SWTP—provides for 25% growth, allows for more plant for cost

#### Recommend Type of plant best suitable to run 6 months of the year

Traditional SWTP (coagulation/clarifier/filter) UF/MF SWTP (membranes) Filter SWTP (coagulation/filters)

#### PER did not include

Sedimentation Basin - to aid plant in handling NTU variations Solids Handling - for removal of settled sludge Chlorination - for disinfection of treated water / coordinate with GW system

#### Costs

Recommend \$1.75/Gallon for 1.0 MGD and \$1.50 for 2.0 MGD

#### **Funding**

USDA Contacts / Standard Procedures
NM Trust Board Contacts / Standard Procedures

#### **Project Next Steps**

Construction Phase

Update PER to include all needed project components
Submit updated project cost to NM Trust Board/USDA RD for funding
Prepare and procure pilot equipment for evaluation
Surface Water Right evaluation
SWTP Permitting
Preliminary Design of SWTP
Final Design of SWTP
Biding of Project

# FORT STOCKTON REVERSE OSMOSIS DESALINATION PLANT

#### The First Municipal R.O. System in Texas

UV Disinfection - Ultraviolet lights housed in these stainless steel shells kill living organisms that may be present in the raw water in order to prevent them from attaching to and growing on the membranes.

Micron Filtration - These filter remove the particles that are 5 microns or larger including sand, silt and other particles

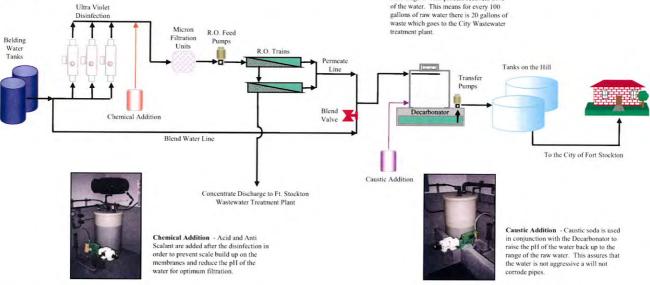

the pressure of the feed water in order to overcome the osmotic pressure of the membranes. The feed pressures range from 175 to 200 psi.

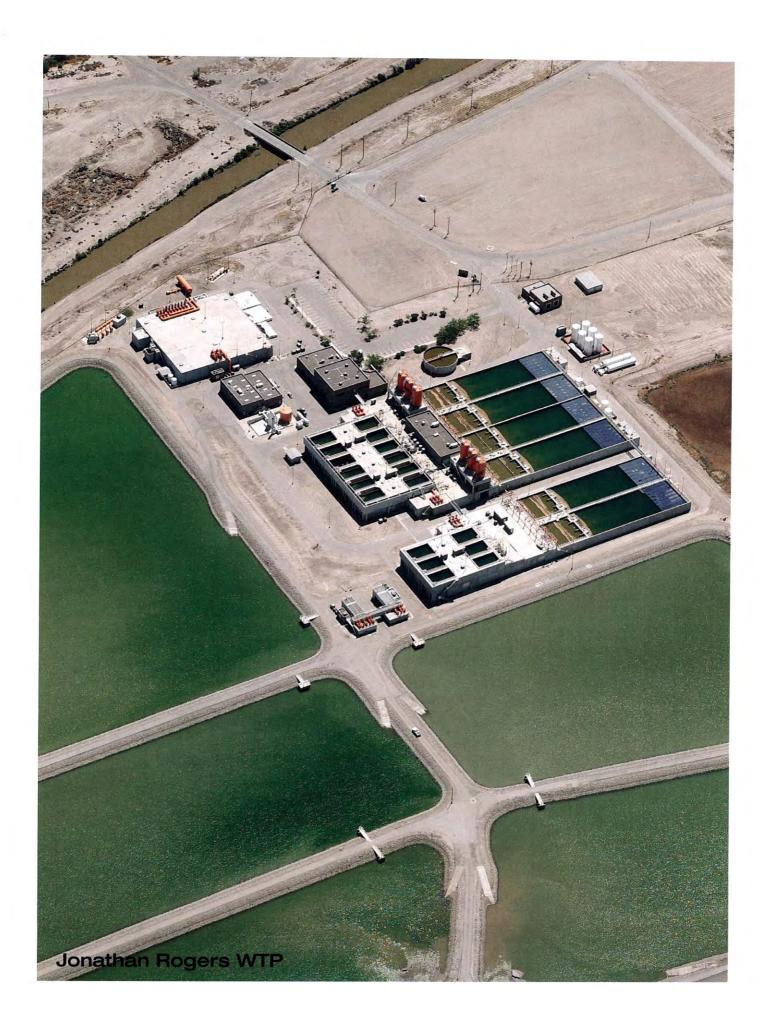

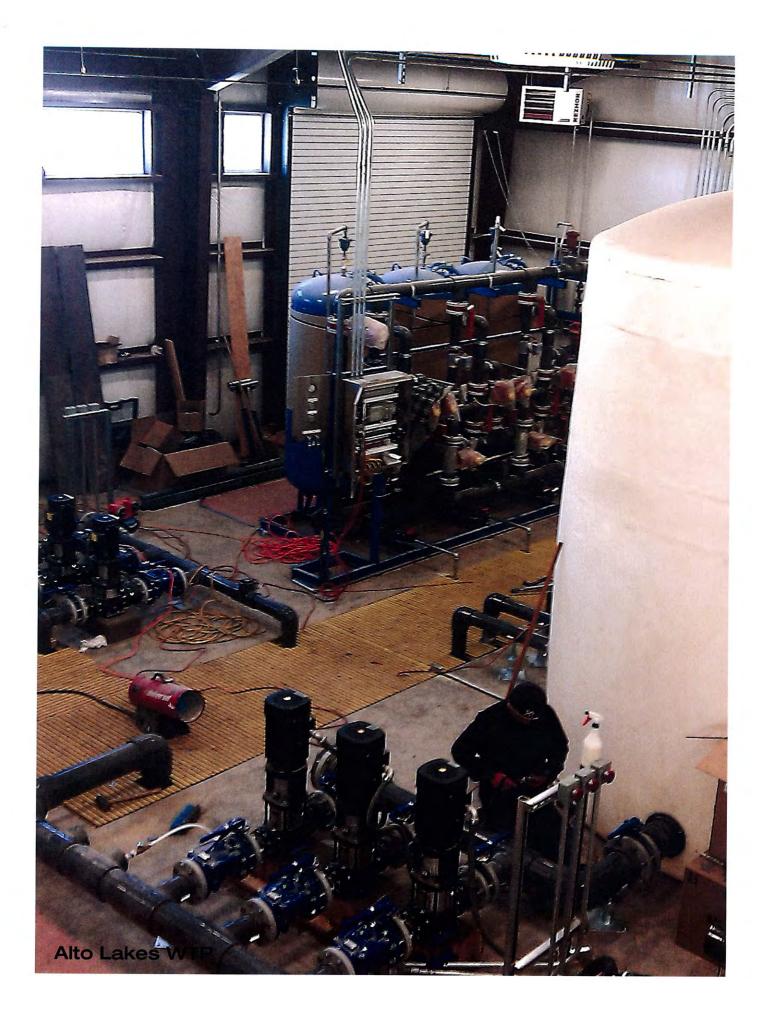

R.O. Train - The plant has three I million gallon per day trains. The trains have 18 tubes for stage I and 9 tubes for stage II. Stage I processes the raw water while stage II processes the concentrate from stage I. This process recovers 80% of the water. This means for every 100 waste which goes to the City Wastewater treatment plant.

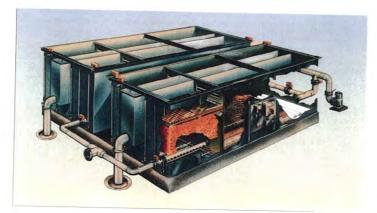

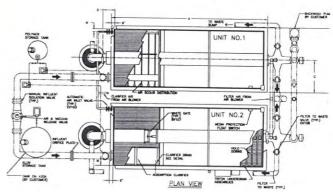

Decarbonator and Transfer Pumping The Decarbonator blows air through the water as it trickles down through the box. The air strips the CO2 from the water and raises the pH of the blended water.

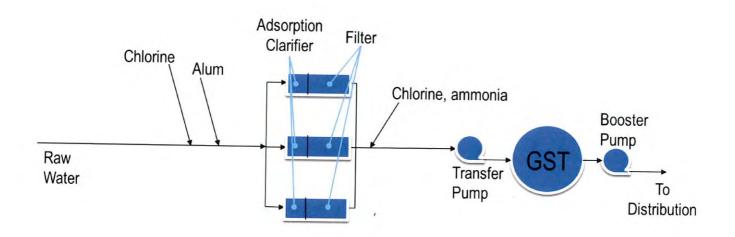

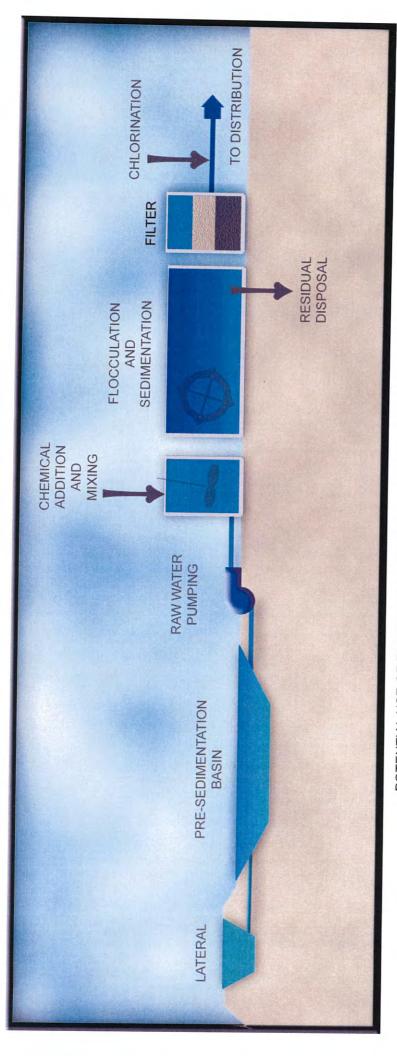

POTENTIAL USE OF PLANT FOR BOTH SURFACE WATER AND GROUND WATER

- PRE-SEDIMENTATION SHOULD BE A MINIMUM OF ONE DAYS SUPPLY.
   ALLOWS SUPPLY FROM LATERAL TO BE SHUT OFF DURING TIME
   WHEN WATER QUALITY IS BAD AND STILL TREAT WATER.
- RESIDUALS TO BE DISPOSED OF ON DRYING BEDS OR IN SLUDGE PONDS SUPPLEMENTAL THICKENING CAN BE ACCOMPLISHED WITH A GRAVITY THICKENER.
- FILTER MEDIA CAN BE TAYLORED TO DESIRED TREATMENT GOALS

3

- 4. CHLORINATION FOR DISINFECTION PRIOR TO SENDING TO DISTRIBUTION.
- 5. FINISHED WATER COULD BE STORED ON SITE OR PUMPED TO DISTRIBUTION IMMEDIATELY.
